Computer Science Undergraduate — Software Engineer

Profile Summary

Computer Science undergraduate and software engineer with hands-on experience building and shipping full-stack applications, backend systems, and developer tools. Experienced in taking products from idea to implementation across internships, independent projects, and hackathons, with a focus on practical engineering, problem solving, and building reliable software.

Education

- **DES Pune University** — Pune, Maharashtra
  Third Year B.Tech — Computer Science Engineering — CGPA: 8.6/10 — *July 2024 – May 2028*

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, C++, C
Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS
Backend: Node.js, Express.js, Django, Flask, REST APIs, JWT, Socket.IO
Databases: PostgreSQL, MySQL, MongoDB, Redis, Prisma, BullMQ
Tools: Git, GitHub, Docker, Linux, Vercel, Render, Hostinger
AI/ML: ResNet50, PaDiM, OpenCV, YOLO, Randomforest, Groq API

Experience

- **E-Vakili — Legal Tech Platform** — Hybrid
  Tech Lead — *December 2025 – September 2026*
  - Built and deployed a full-stack legal platform from scratch, enabling users to discover 30,000+ lawyer profiles through location, district, and practice-area based search.
  - Developed lawyer dashboards with profile analytics, user-interest tracking, chat, and expanded the platform with social features including posts, follows, and connection requests.
  - Integrated a RAG-based support chatbot and deployed the Next.js, Django, and PostgreSQL application on Render with a custom domain and Google-indexed production site.
- **Erfinden — BarterX** — Remote
  Full Stack Developer Intern — *June 2026 – August 2026*
  - Built core features for a barter marketplace enabling product-to-product and product-to-service exchanges, using Next.js, Django, and PostgreSQL.
  - Developed a product scoring and recommendation algorithm that evaluates listing attributes and condition to identify similarly valued products for potential barter matches.
  - Implemented real-time chat with privacy safeguards for user-generated images, along with JWT/OAuth2 authentication and production deployment across Vercel and Render.
- **Admatix — WhatsApp Automation Platform** — Hybrid
  Backend Developer Intern — *March 2026 – May 2026*
  - Built backend APIs and an admin analytics panel to track customer activity across platform sections, with usage data visualized through interactive charts.
  - Integrated Razorpay from scratch for a three-tier subscription system, implementing plan-based feature access, payment verification, upgrade flows, and recurring payments.
  - Implemented subscription and access-control logic to automatically enforce plan-specific features and guide users toward upgrades when accessing locked functionality.

Projects

- **ReachFirst — Real-Time Academic Communication Platform** *(Next.js, Express.js, PostgreSQL, Socket.IO, JWT, Prisma)* — Built to automatically route teacher announcements to the relevant classes or divisions, reducing delays in critical college communication. Supports real-time messaging, role-based access, and keyword-based automatic message routing.
- **FlowLens — Developer Debugging CLI** *(TypeScript, Node.js, WebSockets, Next.js)* — Built a CLI tool to help developers understand the runtime flow behind UI interactions by tracking clicks, navigation, and component activity. Streams live application events to an interactive terminal dashboard for easier debugging and code tracing.
- **DoOrDue — Gamified Anti-Procrastination Platform** *(React, Firebase, Python, YOLO, OCR)* — Built around loss aversion, allowing users to stake money on tasks and recover it with rewards after completing them and submitting valid proof. Developed an AI-based proof verification pipeline using OCR, document analysis, and YOLO-based object detection, with streaks and social accountability features.
- **AI Visual Inspection SaaS — Manufacturing Quality Inspection** *(Python, Flask, React, ResNet50, PaDiM, Groq API)* — Built an automated visual inspection platform using ResNet50 and PaDiM to detect manufacturing defects and generate anomaly heatmaps. Integrated Groq API to produce contextual inspection reports and recommendations.

Achievements & Leadership

- **IND-VNP Dataset — IEEE DataPort** — Published an Indian Vehicle and Number Plate Image Dataset containing 28,864 images, including raw and Gaussian-blurred samples, to support computer vision research and object detection model development.
- **Google Student Ambassador — Gemini** — Selected as a Google Student Ambassador, organizing technical workshops, hackathons, and student developer activities for 4 months.
- **4th Place — Ignitia, MIT-WPU (2026)** — Ranked 4th in a competitive AI hackathon and presented the solution to the organizing panel.
- **5th Place — Navonmesh, IMCC (2026)** — Placed 5th in the hackathon for developing and presenting a technical solution.
- **2nd Runner-Up — InnoQuest, IEEE (2025)** — Recognized for rapid prototyping and collaborative problem solving.
- **Smart India Hackathon — Internal Qualifier (2025)** — Selected through the college-level internal selection process to represent the institution.
